SPCC Meeting - Duane Marine

Michael V. Polito
Emergency Response & Haz. Matls. Insp. Br.

Henry Gluckstern, Attorney
Water Enforcement Branch

On Friday May 23, 1980 I met with Drs Ed McCracken, Professional Engineer, Engineering Sciences, 275 Route 18, East Brunswick, N.J. (201-238-4740) and Mr. Ed Lecarreux, President of Duane Marine, at the Duane Marine facility. During this meeting we discussed my letter to Duane Marine which went out over your signature on April 10, 1980.

All of the items mentioned in this letter were discussed, accompanied by a tour of the facility with all parties. It was agreed that a completed SPCC Plan will be sent to you by July 7, 1980. In addition, a strong oil spill contingency plan will be submitted to me by June 6 to provide for spill protection before those items which will ultimately be addressed in the SPCC Plan can be completed. This oil spill contingency plan will also be employed to provide for spill protection while an identified temporary drum storage area is being removed.

Mr. Lecarreux has made progress in the following areas.

1) A record book has been put together beginning with an initial date of August 1979. Mr. Lecarreux put the book together from more loosely kept records. This record system is entirely adequate and meets the needs of 40 CFR 112.

2) Removal of the drums is actively underway.

3) Temporary sand diking has been added to the drum area and now forms a complete perimeter to the lower drum temporary storage area.

4) The tanks along the shoreline have been pumped out and no longer will be used for storage of oil but only for transportation purposes.

Duane's Plan will be sent to you at which time I will review it for adequacy.

Keep me posted on any new developments.
